SUMMARY

Full Stack Engineer with 5+ years building and shipping production web applications, solo and inside founding teams. Works end-to-end in TypeScript: React, Next.js and Angular on the frontend; Node.js, Express and PostgreSQL/MongoDB on the backend. Ships LLM-backed features into user-facing products using the Anthropic Claude, OpenAI and Google Gemini APIs. Founded a safety-tech SaaS (AlertUp) and took it from concept to production and investor pitch in six weeks; Top 20 of 140 teams at Hacktoberfest Tbilisi 2025.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, C, HTML5, CSS3, SCSS

Frontend: React.js, Next.js (App Router, SSR/ISR), Angular, Tailwind CSS, Responsive Design, Web Accessibility (WCAG)

Backend: Node.js, Express.js, REST API Design, WebSockets (Socket.IO), JWT Authentication, Role-Based Authorization, Session & Email Verification Flows

Databases: PostgreSQL, MongoDB, Mongoose, Redis (caching), Supabase, Relational & Document Data Modelling

AI Engineering: Anthropic Claude API, OpenAI API, Google Gemini API, Tool/Function Calling, Streaming Responses, Retrieval-Augmented Generation, Prompt Design

Cloud & DevOps: AWS (EC2, S3), Vercel, Git, GitHub, GitHub Actions, CI/CD Pipelines

Testing & Design: Jest, Postman, Chrome DevTools, Figma, UI/UX Design

Foundations: Data Structures & Algorithms, System Design, HTTP Internals, Caching Strategies

EXPERIENCE

GeoSafety

Full Stack Engineer

June 2026 – Present

Tbilisi, Georgia | Remote

- Building production features across the stack with **TypeScript**, **React/Next.js**, **Node.js** and **PostgreSQL**, owning work from API contract through UI delivery.
- Designing REST endpoints and relational data models for safety-critical workflows, with authentication, input validation and structured error handling.
- Collaborating on code review, deployment and iteration on user feedback. *[EDIT ME — use a number here.]*

Unburned (Quemmekh)

AI Engineer & Full Stack Engineer | Contract

Jan 2026 – Present

Tbilisi, Georgia

- Building the product platform end-to-end with **Next.js**, **TypeScript**, **Node.js**, **Express.js** and **PostgreSQL**, owning frontend architecture and backend services.
- Shipped LLM-powered features on the **Anthropic Claude API** — prompt design, streaming responses and structured output parsing — inside user-facing flows.
- Designing data models and API contracts with the founding team, including how AI features degrade safely on model failure or low-confidence output.

Garage Records

Full Stack Engineer & UI/UX Designer | Contract

Apr 2026 – Present

Tbilisi, Georgia

- Architected and built the backend for the label's official site (garagerec.vercel.app): REST API design, database modelling and production deployment.

- Designed the brand-consistent UI/UX system in **Figma** — type scale, colour system, component library, responsive layouts — then built it in code.

Subsequence 2.0

Full Stack Engineer & UI/UX Designer | Contract

Apr 2026 – Present

Tbilisi, Georgia

- Leading UI/UX design, frontend architecture and end-to-end system design for a new digital platform built from scratch, ahead of server-side implementation.

AlertUp — Emergency Evacuation SaaS

Founder & Full Stack Engineer

Dec 2025 – Jan 2026

alertup.world

- Took a QR-code-based emergency evacuation SaaS from zero to production in **under 6 weeks**: owners upload floor plans and generate per-location QR codes; occupants scanning during an alarm get real-time routing to the nearest safe exit.
- Engineered the entire stack solo: authentication and email verification, the building/map management portal, dynamic QR generation, and server-side proximity routing over the floor-plan graph.
- Selected for the **re:invent accelerator** in Tbilisi and pitched the product to investor Pavle Mgeladze.

PROJECTS

Algoora — Competitive Programming Platform

React, Node.js, Express.js, MongoDB, Socket.IO, Redis, Gemini API

algoora.vercel.app

- Built a LeetCode/Codewars alternative from scratch: in-browser code execution, curated problem sets, a global ranked leaderboard, live head-to-head competitions and a full team system.
- Implemented real-time tournaments over **Socket.IO** and cut repeat-query load with a **Redis** caching layer for leaderboards and problem data.
- Integrated the **Gemini API** for contextual hints and adaptive explanations, and shipped a paid subscription tier with PayPal/Paddle billing.

DevHealth — Developer Burnout Prevention Platform

React, TypeScript, Supabase, PostgreSQL, Tailwind CSS, VS Code Extension API

devhealth.online

- **Top 20 finalist out of 140 teams** at Hacktoberfest Tbilisi 2025 — presented live to a jury panel at Free University of Tbilisi (co-built with Dachi Sebiskveradze).
- Co-built a web app plus companion **VS Code extension**: Pomodoro timer, sleep/workout tracking, distraction blocking and focus analytics on Supabase/PostgreSQL.

Iluzia (Illusion) — Poster E-Commerce Store

Angular, TypeScript, Node.js, Express.js, MongoDB/Mongoose, Tailwind CSS

iluzia.vercel.app

- Designed and shipped a complete full-stack store solo — catalogue, cart, end-to-end checkout and original Figma artwork — as a self-taught 14-year-old, the first of several production apps.

EDUCATION

Quantum — Computer Science School

Software Engineering Track (Founded by Zaza Omiadze)

2024 – Present

Tbilisi, Georgia

- Intensive curriculum in data structures, algorithms, system design and software engineering principles, plus low-level foundations: binary/hexadecimal/ASCII operations and coursework in Assembly, C, C++ and advanced SQL.

12th Public School of Tbilisi — Secondary Education Diploma, Tbilisi

Graduated 2025

CERTIFICATIONS, AWARDS & LANGUAGES

HackerRank Certified: Frontend Developer (React) | JavaScript (Intermediate) | React (Basic)

Awards: Hacktoberfest Tbilisi 2025 — Top 20 Finalist of 140 teams, presented at Free University of Tbilisi | re:invent Accelerator — selected to pitch AlertUp to investor Pavle Mgeladze

Languages: Georgian (Native) | English (Professional Working Proficiency)
