

Lazare Mirziashvili

Full-Stack Developer & AI-Integrated Systems Builder · Tbilisi, Georgia

+995 555 992 212 | lazaremirziashvili8@gmail.com | linkedin.com/in/lazare-mir | github.com/aponchikaj | Portfolio

SUMMARY

Full-Stack Developer and Founder specializing in **AI-integrated, production-grade web applications**. Built and shipped **Algora** — a competitive coding platform powered by Google Gemini AI — and **AlertUp**, a real-time emergency safety platform using Graph Theory for automated evacuation routing. Experienced in designing AI-driven product features using LLM APIs, prompt engineering, and real-time data pipelines. HackerRank Verified in JavaScript, React, and Frontend Development.

TECHNICAL SKILLS

AI & LLMs: Google Gemini API, OpenAI API, Prompt Engineering, LLM Integration, AI Feature Design, Context Management

Frontend: React.js, Angular, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, RESTful APIs, GraphQL, Socket.io, JWT Authentication, C/C++

Databases & DevOps: MongoDB, PostgreSQL, Supabase, Redis, Git, Vercel, CI/CD, AWS S3

Core: System Design, Graph Algorithms, UI/UX, Real-Time Architecture, Agile Methodology

EXPERIENCE

Founder & Lead Full-Stack Developer

Dec 2025 – Present

AlertUp — Emergency Safety Platform

Tbilisi, Georgia

- Architected a scalable MERN-stack platform using **Graph Theory (Dijkstra's algorithm)** to compute and serve real-time indoor evacuation routes dynamically.
- Developed low-latency **Node.js REST APIs** for QR-code-based indoor navigation with live data streaming, achieving sub-200ms response times.
- Implemented **JWT authentication** with refresh-token rotation and MongoDB clustering for secure, high-availability concurrent user handling.
- Integrated **AI-generated evacuation instructions** via prompt-engineered LLM pipelines that convert graph route data into plain-language guidance for accessibility.

PROJECTS

Algora — AI-Powered Competitive Coding Platform | *React, TypeScript, Node.js, MongoDB, Redis, Socket.io, Gemini A*

- Built a full-stack competitive coding ecosystem with 500+ problems, real-time judge, live tournaments via Socket.io, and Google Gemini AI delivering 6 contextual assistance modes (hints, debug, optimize, solve, review, explain).
- Engineered a freemium subscription system (Free / Premium \$9.99 / Elite \$19.99) with tier-based AI rate limiting, PayPal and Paddle payment processing, and Redis-backed session management.
- Shipped a gamified progression engine — XP/levels, 100+ achievements, virtual coin economy, cosmetics shop, and seasonal Battle Pass — driving daily retention and monetization.

Iluzia E-Commerce Engine | *Live | Angular, Node.js, MongoDB*

Oct 2025

- Designed and built a full CRUD e-commerce platform with dynamic product catalog management, cart workflows, and order processing from end to end.
- Optimized Express.js API structure and applied **MongoDB indexing with response caching**, reducing data retrieval latency by **40%** under sustained load.
- Integrated an **AI-powered product recommendation layer** using prompt-engineered LLM calls to surface contextually relevant items based on user browsing history.

Sandro Menabde Media Platform | *Live | Angular, Node.js*

Dec 2025

- Delivered a production media site serving **5,000+ daily active users**; optimized REST API asset delivery pipelines to cut load times by **30%**.
- Built an **AI-assisted content tagging system** that automatically classifies and labels media uploads using LLM inference, reducing manual editorial overhead significantly.
- Architected modular Angular components with lazy loading and client-side caching for consistent performance under peak traffic.

DevHealth Dashboard | *React.js, Supabase, PostgreSQL*

Oct 2025

- **Awarded Best UI/UX — Top 20 at HackTbilisi:** Built a real-time developer health and productivity tracker with secure Supabase Auth and live PostgreSQL data sync.
- Embedded an **AI wellness coach** feature that analyzes logged developer habits via LLM prompts and generates personalized daily wellbeing recommendations.
- Designed the complete UI/UX from wireframes to polished production components, emphasizing clarity, accessibility, and mobile responsiveness.

Noter App | *React.js, Node.js, MongoDB*

Sep 2025

- Built a JWT-secured full-stack note management system with optimized React state architecture (Context API + custom hooks) for a responsive, lag-free experience.
- Added an **AI summarization feature** that condenses long notes into key bullet points via LLM API calls, improving information retrieval speed for users.

CERTIFICATIONS

HackerRank Verified — Professional Certifications

- **Frontend Developer (React):** React Hooks, component architecture, and responsive UI design.
- **JavaScript (Intermediate):** Async/await, ES6+ patterns, closures, and functional programming.
- **React (Basic):** Component lifecycle, state management, and Hooks fundamentals.

EDUCATION

12th Government School

High School Diploma (Expected May 2027)

Tbilisi, Georgia

Sep 2016 – Present
